RESEARCH QUESTION

My research examines how scientists and other highly skilled workers move across organisations and cities, how relational ties shape mobility decisions, and how mobility reorganises collaboration, knowledge diffusion, and regional innovation.

CURRENT RESEARCH

Scientific careers and mobility

Longitudinal career histories, intercity mobility networks, institution-city linkage, and city opportunity structures.

Collaboration and relational capital

Event-specific destination choice, pre-move coauthor ties, tie breadth, persistence, timing, and candidate-city comparison.

Innovation and knowledge production

Knowledge-network reconfiguration, regional innovation contexts, firm-year innovation measurement, patents, trademarks, and R&D; data where verified.

SELECTED EVIDENCE

- Accepted first-author article in *World Regional Studies* on global top biomedical scientists' mobility from an urban-network perspective.
- Submitted Scientometrics-oriented manuscripts on whole-network / ego-network mobility and pre-move coauthor ties in destination choice.
- Master's thesis using a 500-scientist, 1970-2023 longitudinal database linking career histories, mobility ego networks, WERGM, GIS, and trajectory classification.

DATA & METHODS

Longitudinal career reconstruction; publication-institution-city linkage; relational datasets; event-specific candidate sets; conditional logit; WERGM; social network analysis; spatial analysis; entity matching; Python, R, Stata, GIS, Git, and Quarto workflows. Restricted Scopus records and raw research data are not included in public materials.

LOOKING FOR

PhD opportunities, predoc / RA roles, and research collaboration for the 2027 entry/application cycle in science of science, scientific mobility, knowledge networks, innovation studies, computational social science, and related empirical social-science fields.
